PROFESSIONAL SUMMARY

Computer Science Engineering graduate with hands-on experience building and deploying Python-based web applications, REST APIs, and AI-powered applications. Experienced with FastAPI, Flask, PostgreSQL, RAG pipelines, API integration, Git, Linux, and cloud deployment. Built end-to-end projects involving document processing, vector retrieval, LLM integration, request validation, rate limiting, and external API integration. Seeking an Associate Software Engineer role to contribute to reliable software products and grow across backend and full-stack development.

WORK EXPERIENCE

Front-End Developer Intern — DataPMI Technologies LLP 01-06-2025 – 31-06-2025 | Infopark, Kochi, Kerala

- Collaborated with a cross-functional development team on Prolex AI, contributing to feature implementation and iterative product releases.
- Developed responsive front-end components using HTML, CSS, and JavaScript, translating design requirements into user-facing interfaces.
- Integrated front-end components with backend APIs using FastAPI, supporting end-to-end feature delivery.
- Used Git and GitHub for version control, branch-based development, and collaborative code workflows.
- Debugged UI and integration issues using Chrome DevTools, inspecting console errors, network requests, and element styles.

Software Development Intern — Zyncrypt Technologies 02-07-2024 – 16-07-2024 | Kerala, India

- Worked with Linux environments and networking fundamentals while supporting day-to-day software development tasks.
- Participated in task coordination and project workflows, gaining practical experience with collaborative software development practices.

EDUCATION

St Thomas College of Engineering and Technology, Kochuvalloor — Chengannur 2026
Bachelor's Degree in Computer Science Engineering (Artificial Intelligence & Machine Learning)
CGPA: 7.86

St. Mary's Residential Public School — Tiruvalla 2024
Higher Secondary (Class XII)
72% – Central Board of Secondary Education (CBSE)

VOLUNTEERING & LEADERSHIP

Coordinator — NSS KTU CARE Unit 553 2023-01-01 – 2025-01-01 | Kerala, India

- Coordinated volunteers and supported planning and execution of NSS activities and community service initiatives.
- Collaborated with team members to coordinate event communication, participation, and activity execution.

Class Representative — St Thomas College of Engineering and Technology 2023-01-01 – 2024-01-01 | Kerala, India

- Coordinated communication between students and faculty regarding academic activities and announcements.
- Supported planning and communication of class activities and academic requirements.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, HTML, CSS

Backend: FastAPI, Flask, REST APIs, PostgreSQL, Pydantic, Uvicorn

AI / Machine Learning: RAG, Vector Retrieval, FAISS, LLM APIs, NumPy, Pandas

Tools & Platforms: Git, GitHub, Linux, Render, Vercel, Postman, Chrome DevTools, VS Code

PROJECTS

PaperLens — Research Paper Analysis Platform

[GitHub](#) | [Live Demo](#)

- Built a session-based document analysis application that accepts PDF and text files and enables users to query document contents using a Retrieval-Augmented Generation (RAG) pipeline.
- Developed FastAPI endpoints for document upload, validation, processing, retrieval, and question answering with structured error handling and configurable application limits.
- Implemented document chunking and vector-based retrieval to identify relevant context for LLM-generated responses, and deployed the application on Render.

AI Assistant

[GitHub](#) | [Live Demo](#)

- Developed a web-based AI assistant with a Python backend that integrates LLM APIs through server-side requests.
- Implemented REST endpoints, request validation, rate limiting, and frontend-backend communication for reliable conversational interactions.
- Secured API credentials using environment variables and deployed the application on Render.

Weather Web App

[GitHub](#) | [Live Demo](#)

- Developed a Flask-based web application that retrieves real-time weather information through a third-party weather API.
- Implemented REST API integration, city-based search, response handling, and error handling for invalid or unavailable requests.
- Connected the frontend with backend endpoints and deployed the application on Render.

LANGUAGES

Malayalam (Native), English (Fluent), Hindi (Basic)
